We at Medion Helathcare design ambulances that are capable to support advance life support to patients allowing transportation at long distances giving them a state of the art facility which is almost identical to the Hospital ICU.

The vehicle interior is designed with a modular effect keeping in mind the provisions required for setting up the equipments that would be required in a Criticalcare environment. All provisions are designed & made available in such a way that it allows user to equip the vehicle with specialised life support equipments like Transport Ventilator, Patient Monitor, Defibrillator, Syringe & Infusion Pump & suction Apparatus. Each equipment provision & placement is done keeping in mind the user convenience for use in the vehicle. Snap Fit arrangements are provided to firmly hold the equipments at the same time allowing easy removal from the vehicle at the time of emergencies or while patient transfer.

The standard Ambulance supplied comes equipped with Central Gas Supply System which has an ON/OFF system & electronic Alarm System in Case of Low Gas. Features like Wash Basin with Auto Water Flow, Waste Bins, Drawers, & storage facilities are offered as standard part of the system & are conveniently placed for easy use.

Apart from the above as standard we offer imported lightweight Automatic Loading Patient Stretcher which can be handled by single person, All Aluminium Foldable Scppo Stretcher & high Intensity imported light Bar with Hooter & public address System.
